MAIVELLE

Complete App Branding Kit | Brand Identity System - Version 1.0

Everything You Value, in One Place.

Master logo concept and Android app icon artwork. This is a presentation mockup, not an asset-ready transparent export.

A modern, elegant, purple-led design language for a private, family-focused Android application. Inspired by the name Marielle, with a subtle heart integrated into the letter M.

01 / Brand Foundation

Personality: Elegant, trustworthy, personal, secure, romantic, minimalist.

Core message: Maivelle is a beautiful, private space for the things that matter most.

Logo symbolism: M stands for Maivelle and Marielle. The heart communicates care, connection, and the value of keeping important things close.

02 / Official Color Palette

Primary Purple | #6D42B5
Buttons, active tabs, highlights

Deep Plum | #2D1B4E
Titles, logo, dark elements

Soft Lavender | #A78BFA
Secondary accents

Light Lavender | #EDE5FF
Selected cards, subtle surfaces

Ivory Lavender | #F8F5FF
Light mode background

Pure White | #FFFFFF
Cards, text fields, modals

Semantic Colors

State	Hex	Use
Success	#21865C	Confirmed action
Warning	#C78519	Caution, needs attention
Error	#D64550	Validation failures, destructive actions
Secondary text	#756A86	Supporting descriptions
Border	#DDD5E9	Input and card outlines

Use purple for identity and actions. Preserve semantic colors for statuses instead of conveying every state through purple alone.

03 / Typography

Heading font: Plus Jakarta Sans (Bold / SemiBold). Body font: Inter (Regular / Medium). Use platform fallbacks if custom fonts are not yet installed.

Role	Font size	Weight
Display	32	700
Page heading	26	700
Section heading	20	600
Card heading	16	600
Body	14-16	400
Caption	12	500
Button	15	600

04 / UI Design Language

Use soft lavender backgrounds, clean white content surfaces, confident purple calls to action, rounded card edges and generous whitespace. Icons should share a consistent rounded-outline style.

Element	Specification
Primary background	#F8F5FF
Cards	White, 16-20px corner radius
Primary button	Purple (#6D42B5), 14px radius
Inputs	White, pale lilac border
Modals	24px corner radius
Screen horizontal padding	20 logical px
Spacing scale	4 / 8 / 12 / 16 / 24 / 32
Icon styling	Rounded outline; approximately 2px stroke
Animation duration	150-250ms, subtle transitions

Conceptual Screen Hierarchy

Dashboard header: personal greeting and date.
Feature spotlight: Vault feature card with privacy messaging.
Quick-access cards: Notes, Reminders and other family tools.
Navigation: Home, Notes, Vault and Settings.

05 / Dark Mode

Token	Value
Background	#171122
Surface	#292037
Raised surface	#352A47
Primary accent	#A78BFA
Primary text	#F7F2FF
Secondary text	#C3B7D5
Borders	#473A5C

Check contrast across both themes. Purple text and controls need adequate distinction from the surrounding surface.

06 / Logo & Export Assets

Asset	Purpose	Guideline
maivelle-logo.png	Onboarding and brand screens	High-res transparent
maivelle-mark.svg	Scalable identity symbol	Editable vector
icon.png	Expo launcher icon	1024 x 1024 PNG
adaptive-icon.png	Android adaptive foreground	1024 x 1024 PNG
splash-icon.png	Splash screen	High-res transparent PNG
favicon.png	Optional Expo web	48 x 48 PNG

Preserve the proportions and clear space around the mark. Build actual exports from the approved master artwork; do not use the entire presentation board as a launcher icon.

07 / Brand Voice & Microcopy

Tone: calm, thoughtful, reassuring, minimal and welcoming. Prefer specific, plain language over technical jargon or unsupported security promises.

Context	Recommended text
Welcome	Your space for everything that matters.
Sign in	Welcome back to Maivelle.
Vault	Keep the important things close.
Notes	Every thought deserves a place.
Empty state	Your next idea starts here.
Saved	Saved successfully.
Privacy	Your space. Your control.

08 / Expo Implementation - Design Tokens

Step 1: Create src/theme/tokens.ts. These tokens define the standardized colors, spacing, radii and typography.

```
export const colors = {
  brand: {
    primary: "#6D42B5", deepPlum: "#2D1B4E",
    lavender: "#A78BFA", lightLavender: "#EDE5FF",
    ivory: "#F8F5FF", white: "#FFFFFF",
  },
  light: {
    background: "#F8F5FF", surface: "#FFFFFF",
    text: "#2D1B4E", textSecondary: "#756A86",
    primary: "#6D42B5", accent: "#A78BFA",
    border: "#DDD5E9",
  },
  dark: {
    background: "#171122", surface: "#292037",
    surfaceRaised: "#352A47", text: "#F7F2FF",
    textSecondary: "#C3B7D5", primary: "#A78BFA",
    accent: "#C4A7FF", border: "#473A5C",
  },
  status: {
    success: "#21865C", warning: "#C78519",
    error: "#D64550",
  },
} as const;

export const spacing = {
  xs: 4, sm: 8, md: 12, lg: 16, xl: 24, xxl: 32,
} as const;
export const radius = {
  sm: 8, md: 12, lg: 16, xl: 20,
  modal: 24, full: 999,
} as const;
export const typography = {
  display: 32, pageTitle: 26, sectionTitle: 20,
  cardTitle: 16, body: 14, button: 15, caption: 12,
} as const;
```

09 / Expo Implementation - Theme & Button

Step 2: Create src/theme/useAppTheme.ts. This switches app colors with the Android theme.

```
import { useColorScheme } from "react-native";
import { colors, radius, spacing, typography } from "./tokens";

export function useAppTheme() {
  const isDark = useColorScheme() === "dark";
  return {
    colors: isDark ? colors.dark : colors.light,
    status: colors.status,
    spacing, radius, typography, isDark,
  };
}
```

Step 3: Create src/components/ui/PrimaryButton.tsx. Use the shared palette for an accessible, reusable button.

```
import React from "react";
import { Pressable, StyleSheet, Text } from "react-native";
import { useAppTheme } from "../../theme/useAppTheme";

type PrimaryButtonProps = {
  title: string;
  onPress: () => void;
  disabled?: boolean;
};

export function PrimaryButton({
  title, onPress, disabled = false,
}: PrimaryButtonProps) {
  const theme = useAppTheme();
  return (
    <Pressable
      onPress={onPress}
      disabled={disabled}
      accessibilityRole="button"
      accessibilityState={{ disabled }}
      style={({ pressed }) => [
        styles.button,
        {
          backgroundColor: theme.colors.primary,
          borderRadius: theme.radius.md,
          opacity: disabled ? 0.5 : pressed ? 0.85 : 1,
        },
      ]}
    >
      <Text style={[
        styles.text,
        { color: theme.isDark ? "#211335" : "#FFFFFF" },
      ]}>
        {title}
      </Text>
    </Pressable>
  );
}

const styles = StyleSheet.create({
  button: {
    minHeight: 48, alignItems: "center",
    justifyContent: "center", paddingHorizontal: 20,
  },
  text: { fontSize: 15, fontWeight: "600" },
});
```

10 / Expo App Configuration

Step 4: Merge these values into your existing app.json or app.config.ts. Preserve current navigation and plugin settings. The image paths below require real production assets.

```
{
  "expo": {
    "name": "Maivelle",
    "slug": "maivelle",
    "scheme": "maivelle",
    "userInterfaceStyle": "automatic",
    "icon": "./assets/images/icon.png",
    "backgroundColor": "#F8F5FF",
    "android": {
      "adaptiveIcon": {
        "foregroundImage": "./assets/images/adaptive-icon.png",
        "backgroundColor": "#6D42B5"
      }
    },
    "plugins": [
      [
        "expo-splash-screen",
        {
          "image": "./assets/images/splash-icon.png",
          "imageWidth": 200,
          "backgroundColor": "#F8F5FF",
          "dark": { "backgroundColor": "#171122" }
        }
      ]
    ]
  }
}
```

11 / Branding Implementation Roadmap

Phase	Deliverable
01 - Identity	Approve master logo, palettes and fonts
02 - Production exports	Prepare icons, adaptive icon and splash artwork
03 - Theme framework	Add tokens, theme hook and shared controls
04 - App screens	Apply styles to onboarding, dashboard, Notes, Vault, Settings
05 - QA	Check contrast, adaptive icons, Android sizes and dark mode

Important Brand & Security Principle

The heart, shield, lock and purple branding communicate care and trust, but do not establish security. Privacy claims must be backed by actual local storage controls, encryption as appropriate, authentication and transparent data handling.

Maivelle - Everything You Value, in One Place.
